

ABSTRACT OF THE DISCLOSURE

A method of using an overlay (310) to verify or form folding, embossing, or rule die (320) comprising the steps of: forming an overlay consisting of the steps of: creating an imaged receiver sheet (140) having an
5 image (210), a first thermal print layer (224), and a support layer (145);
laminating a plastic sheet (260) with the imaged receiver sheet thereby encapsulating the image; removing the support layer forming an overlay with an electrostatic charge; and using the overlay to verify or form a folding, embossing,
10 or rule die.
